

C02 Laser Drilling Machine

LC-2Q252

High-Speed, High-Precision C02 Laser Drilling Machine
for HDI/BGA Package PCBs

The global standard in laser drilling machines
Greater improvements to total productivity through
reduction of non-processing time

Via Mechanics, Ltd.

Improved productivity through the pursuit of better stability and reduction of non-processing time

□ Solving HDI PCB small diameter and high precision needs using package processing technologies

Equipped with a high rigidity machine structure and a variety of correction systems to provide the strict precision required for miniaturization and higher density. Also incorporates a variety of proprietary heat countermeasures to achieve more stable drilling precision.

□ New technologies which contribute to increased productivity

Introduction of a new laser pulse control method allows for a reduction in the number of shots to achieve both increased productivity and higher quality processing. The development of a new type of power sensor has also made it possible to greatly reduce measurement time (an 80% reduction compared to our previous model), and a new application has made it possible to reduce preparation time by 50%. These reductions in non-processing time contribute to the improvement of total productivity.

Processing speed improved by reducing the number of shots and high quality processing achieved without damaging bottom layers < Patented >

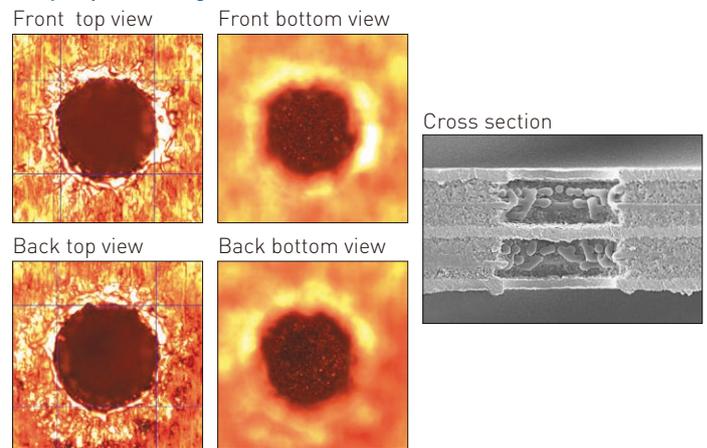

□ The industry's top class processing speed

Processing speed has been dramatically improved (a 125% improvement compared to our previous model) by installing our new, in-house designed high-speed galvano scanners in addition to a proprietary XY table and galvano synchronization.

LC-2Q252/Major specifications

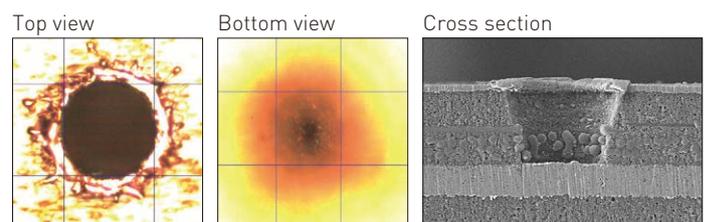

Max. drilling area	635 x 813mm 2panels
XY positioning speed	50m/min
Number of beams	2
Laser output	500W
Galvano scan area	□70mm (OP : □30mm, □50mm)
Drilling accuracy	±0.010mm
CNC	MARK-55L

3 layer processing

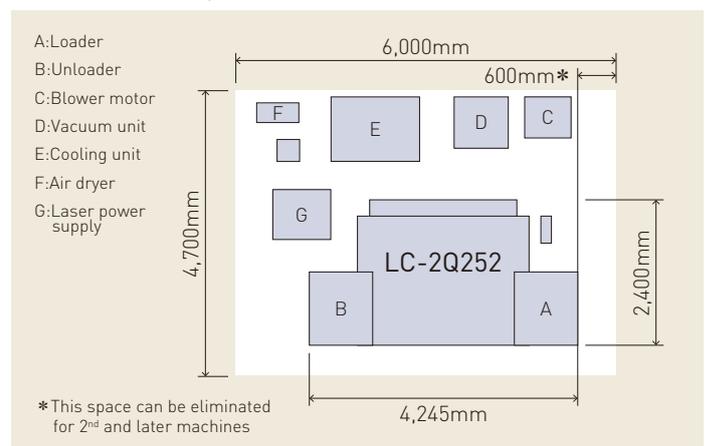

Direct drilling of unprocessed Cu

Hole diameter 35 μm

Installation floor plan
